

Alps Mountaineering Zephyr 3-Man Backpacking Tent

Narrow end of Zephyr. See how Poles cross before entering sleeves.

Be sure to position narrow end of footprint under narrow end of tent.

Put poles through footprint grommets before tent grommets (footprint grommets on top), so footprint grommets don't fall off.

Wide end of Zephyr. See short pole tucked into pockets at top of tent.

Side of Zephyr. Wide end is on left. Doors open toward wide end.

Narrow end of fly. Doors staked.

Wide end of fly. End is staked.

Zephyr AL

The Zephyr model is ideal for those hot, muggy nights when you want to feel a breeze in your tent. The walls are composed entirely of mesh, allowing maximum ventilation and fresh air. The unique 2 pole design gives you more head room to sit up, without feeling cramped. The Zephyr features aircraft alloy aluminum poles, which are strong and lightweight. There are two doors on each side to make it easy to get in and out of the tent. There are also two vestibules over each door that create a great place to store your extra gear. The fly buckles to the tent, offering a much more secure attachment when compared to elastic cord. Incredible ventilation, great head room, and lightweight...a great combination, creating a high quality tent!
